

University Hildesheim

Faculty 4

Mathematics, Natural Sciences, Economics and Computer Science

# Data Analytics International Master

**Course Catalogue (Fundamental Track)**

valid for PO 2023 und PO 2024  
as of 29. September 2023 and März 2024, respectively  
last editorial changes: October 18, 2024

## Compulsory Modules

Module	Type/HPW	CPs	P.
Machine Learning	2 HPW lecture, 2 HPW tutorial	6	5
Modern Optimization Techniques	2 HPW lecture, 2 HPW tutorial	6	7
Advanced Machine Learning	2 HPW lecture, 2 HPW tutorial	6	9
Big Data Analytics	2 HPW lecture, 2 HPW tutorial	6	11
Planning and Optimal Control	2 HPW lecture, 2 HPW tutorial	6	12
Lab Course Programming Machine Learning	4 HPW lab course	6	14
Lab Course Distributed Data Analytics	4 HPW lab course	6	15
Data and Privacy Protection	2 HPW lecture	3	16
Seminar Data Science II	2 HPW Seminar	4	17
Seminar Data Analytics I	2 HPW seminar	4	18
Seminar Data Analytics II	2 HPW seminar	4	19
Student Research Project	4 HPW project	15	20

## Elective Modules

### Methodological Specialization

Module	Type/HPW	CPs	P.
Advanced Case-Based Reasoning	2 HPW lecture, 2 HPW tutorial	6	21
Advanced Computer Vision	2 HPW lecture, 2 HPW tutorial	6	23
Bayesian Networks	2 HPW lecture, 2 HPW tutorial	6	24
Business Analytics	2 HPW lecture, 2 HPW tutorial	6	26
Computer Vision	2 HPW lecture, 2 HPW tutorial	6	28
Large Language Models	2 HPW lecture, 2 HPW tutorial	6	29
Deep Learning	2 HPW lecture, 2 HPW tutorial	6	30
Deep Learning 2	2 HPW lecture, 2 HPW tutorial	6	31
Deep Learning Masterclass	4 HPW lecture, 4 HPW tutorial	6	32
Graph Analytics	2 HPW lecture, 2 HPW tutorial	6	33
Lab Course Deep Learning	4 HPW lab course	6	34
Machine Learning for IT Security	2 HPW lecture, 2 HPW tutorial	6	35
Semi-supervised, Weakly Supervised, and Self-supervised Learning	2 HPW lecture, 2 HPW tutorial	6	37
Survey Sampling	2 HPW lecture, 2 HPW tutorial	6	39
Time Series Analysis	2 HPW lecture, 2 HPW tutorial	6	40
Topics in Statistical Inference			41
Social Network Analysis			42
Conceptual Data Analysis			44
Foundations and Applications of Knowledge Representation			46

---

## Application

### Computer Science/Software Engineering

Module	Type/HPW	CPs	P.
Software Engineering	2 HPW lecture, 2 HPW tutorial	6	48
Model-based Software Engineering	2 HPW lecture, 2 HPW tutorial	6	50
Advanced Web Development	2 HPW lecture, 2 HPW lab course	6	51
Processes and Management of Software Engineering	2 HPW lecture, 2 HPW tutorial	6	52
Software Product Line Engineering	2 HPW lecture, 2 HPW tutorial	6	53
Software Testing	2 HPW lecture (with integrated tutorial)	3	55
Analysis of Software Systems	2 HPW Lecture with Tutorium	3	56
Software Verification	2 HPW lecture and tutorial	3	57
Software Architectures	2 HPW lecture, 2 HPW tutorial	6	58
Requirements Engineering for Quality	2 HPW lecture, 2 HPW tutorial	6	60
SE Tools Lab	4 HPW lab course	6	61
Master-Seminar Software Engineering	2 HPW seminar	4	62

### Business Administration and Information Systems

Module	Type/HPW	CPs	P.
Advanced Marketing / Marketing 2	4 HPW lecture	6	63
Project Scheduling	2 HPW lecture, 2 HPW tutorial	6	64
Seminar Business Studies	2 HPW seminar	4	66
Business Intelligence and Data Warehousing	2 HPW lecture, 2 HPW tutorial	6	67
Data Warehousing in Practice	2 HPW lecture, 2 HPW tutorial	6	68

### Information Retrieval and Information Sciences

Module	Type/HPW	CPs	P.
Introduction Information Retrieval (IR)	2 HPW lecture	4	70
Introduction Natural Language Processing	3 HPW lecture	4	71
Multilingual Information Systems	2 HPW lecture	4	72
Seminar Multilingual Information Retrieval	2 HPW seminar	4	73
Project Multilingual Information Systems	4 HPW project	6	74
Lab Course Information Retrieval (IR)	2 HPW lab course	4	75

### Natural Language Processing

Module	Type/HPW	CPs	P.
Natural Language Processing	2 HPW lecture, 2 HPW tutorial	6	76
Language Modelling	2 HPW lecture 2 HPW project	6	78
Natural Language Processing 2	2 HPW lecture	4	80
Seminar Computer Linguistic Resources	2 HPW seminar	4	82
Seminar Computer Linguistic Processes	2 HPW seminar	4	83
Project Computer Linguistic Resources	4 HPW project	6	84
Project Computer Linguistic Processes	4 HPW project	6	85
Lab Course Natural Language Processing	2 HPW lab course	4	86

## Compulsory Modules

---

### Psychology

Module	Type/HPW	CPs	P.
Cognitive Psychology	2 HPW lecture, 2 HPW tutorial	6	89
Brain and Neural Science	2 HPW lecture, 2 HPW tutorial	6	90

### Environmental Sciences

Module	Type/HPW	CPs	P.
Geographic Information Systems	2 HPW lecture, 4 HPW tutorial	6	93

### Soft Skills

Module	Type/HPW	CPs	P.
English 1	2 HPW lecture	3	94
English 2	2 HPW lecture	3	95
German 1	2 HPW lecture	3	96
German 2	2 HPW lecture	3	97
International Start-up School	2 HPW lecture	3	98

### Master Thesis

Module	Type/HPW	CPs	P.
Master Thesis	Master Thesis	30	99

# Compulsory Modules

## Module: Machine Learning

Responsible	Prof. Dr. Niels Landwehr, Prof. Dr. Dr. Lars Schmidt-Thieme
Lecturer	none
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After the completion of this module, the students should be able to map practical tasks to their respective theoretical problem. They should have developed a deeper understanding in the field of machine learning. They should be able to recognize the different types of machine learning problems as well as understand, implement and apply different machine learning techniques. The students should be capable of adapting those techniques to specific applications. In addition, they should be in a position to understand and elaborate further procedures based on the literature.
Content	The lecture gives an overview of machine learning. It focuses on: <ol style="list-style-type: none"><li>1. <i>fundamental machine learning problems</i>: different machine learning problems are described and shown in examples.</li><li>2. <i>classification</i>: basic models for decision and classification tasks are treated (logistic regression, nearest neighbor, decision trees, neuronal networks, support-vector machine, simple bayesian networks).</li><li>3. <i>cluster-analysis and dimensionality reduction</i>: models for non-supervised classification are treated (hierarchical clustering, k-means, graph partitioning).</li><li>4. <i>application of machine learning models for problems in informatics</i></li></ol>
Submodules	<i>SM 1: Advanced Machine Learning, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme <i>SM 2: Advanced Machine Learning, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group

Literature	<ul style="list-style-type: none"> <li>• Kevin Murphy: <i>Machine Learning: a Probabilistic Perspective</i>. MIT Press, 2012.</li> <li>• Richard O. Duda, Peter E. Hart, David G. Stork: <i>Pattern Classification</i>. Springer, 2001.</li> <li>• Trevor Hastie, Robert Tibshirani, Jerome Friedman: <i>The Elements of Statistical Learning</i>. Springer, 2001.</li> <li>• Tom Mitchell: <i>Machine Learning</i>. McGraw-Hill, 1997.</li> </ul>
Requirements	The module Machine Learning is compulsory for all students but those having an equivalent module already in their Bachelor's.
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li> </ul>
Language	English

## Module: Modern Optimization Techniques

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The students should have developed a deeper understanding in the field of Optimization. They learn to implement and apply different optimization techniques and should be able to adapt these techniques to specific applications. They should be able to map practical tasks to their respective theoretical problem. Students are able to recognize different types of optimization problems and should be able to understand and elaborate further procedure based on the literature.
Content	<p>The Lecture will discuss Optimization techniques on which modern Data Analytics approaches are based. The topics discussed will be:</p> <ol style="list-style-type: none"> <li>1. <i>Optimization Problems</i>: the different types of Optimization problems will be described both formally and with examples</li> <li>2. <i>Unconstrained and Equality Constrained Convex Optimization</i>: The main convex optimization methods (Stochastic Gradient Descent, Newton Methods, and Coordinate Descent)</li> <li>3. <i>Interior Point Methods</i>: Methods for solving inequality constrained problems by solving a sequence of unconstrained, or equality constrained, problems.</li> <li>4. <i>Modern Optimization methods</i>: Extensions and improvements of classical optimization methods: Quasi-Newton, Conjugate Gradient, Bundle methods and Cutting-plane algorithms</li> </ol>
Submodules	<p><i>SM 1: Modern Optimization Techniques, lecture</i> Type: 2 HPW lecture (3 ECTS) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme</p> <p><i>SM 2: Modern Optimization Techniques, tutorial</i> Type: 2 HPW tutorial (3 ECTS) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group</p>
Literature	<ul style="list-style-type: none"> <li>• Stephen Boyd and Lieven Vandenberghe. <i>Convex Optimization</i>. Cambridge Univ Press, 2004.</li> <li>• Suvrit Sra, Sebastian Nowozin and Stephen J. Wright. <i>Optimization for Machine Learning</i>. MIT Press, 2011.</li> <li>• Igor Griva. <i>Linear and nonlinear optimization</i>. Society for Industrial and Applied Mathematics, 2009.</li> </ul>
Requirements	none
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1
Turn	every winter term
Duration	1 Semester

Compulsory Modules – Modern Optimization Techniques

Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	English

## Module: Advanced Machine Learning

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Lecturer	none
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After the completion of this module, the students should be able to map practical tasks to their respective theoretical problem. They should have developed a deeper understanding in the field of machine learning. They should be able to recognize the different types of machine learning problems as well as understand, implement and apply different machine learning techniques. The students should be capable of adapting those techniques to specific applications. In addition, they should be in a position to understand and elaborate further procedures based on the literature.
Content	The lecture gives an overview of machine learning. It focusses on: <ol style="list-style-type: none"> <li>1. <i>fundamental machine learning problems</i>: different machine learning problems are described and shown in examples.</li> <li>2. <i>classification</i>: basic models for decision and classification tasks are treated (logistic regression, nearest neighbor, decision trees, neuronal networks, support-vector machine, simple bayesian networks).</li> <li>3. <i>cluster-analysis and dimensionality reduction</i>: models for non-supervised classification are treated (hierarchical clustering, k-means, graph partitioning).</li> <li>4. <i>methods for learning hyperparameters</i></li> <li>5. <i>structured prediction</i></li> </ol>
Submodules	<i>SM 1: Advanced Machine Learning, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme <i>SM 2: Advanced Machine Learning, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group
Literature	<ul style="list-style-type: none"> <li>• Kevin Murphy: <i>Machine Learning: a Probabilistic Perspective</i>. MIT Press, 2012.</li> <li>• Richard O. Duda, Peter E. Hart, David G. Stork: <i>Pattern Classification</i>. Springer, 2001.</li> <li>• Trevor Hastie, Robert Tibshirani, Jerome Friedman: <i>The Elements of Statistical Learning</i>. Springer, 2001.</li> <li>• Tom Mitchell: <i>Machine Learning</i>. McGraw-Hill, 1997.</li> </ul>
Requirements	The lecture 'Machine Learning' is recommended.
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1
Turn	every summer term
Duration	1 Semester

Compulsory Modules – Advanced Machine Learning

---

Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	English

**Module: Big Data Analytics**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The Students should have developed an extended understanding in the field of Big Data Analytics and be able to map practical tasks to their respective theoretical problem. They should be able to use the learned methods for more complex problems and be able to recognize differences in the problems. In addition, they should be in a position to understand and elaborate further procedures based on the literature.
Content	The course will cover the following topic areas: <ol style="list-style-type: none"><li>1. <i>Large Scale Distributed File Systems and Data Storage frameworks</i></li><li>2. <i>Computational models for large scale data:</i> (e.g. MapReduce and GraphLab)</li><li>3. <i>Data Stream Analysis</i></li><li>4. <i>Statistical learning techniques for Large Scale Data:</i> For example Large Scale Recommender Systems and Link Analysis</li></ol>
Submodules	<i>SM 1: Big Data Analytics, lecture</i> Type: 2 HPW lecture (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme <i>SM 2: Big Data Analytics, tutorial</i> Type: 2 HPW tutorial (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group
Literature	<ul style="list-style-type: none"><li>• Anand Rajaraman, Jure Leskovec, and Jeffrey Ullman: <i>Mining of massive datasets</i></li><li>• Yucheng Low, Joseph Gonzalez, Aapo Kyrola, Danny Bickson, Carlos Guestrin and Joseph M. Hellerstein: <i>Distributed GraphLab: A Framework for Machine Learning and Data Mining in the Cloud</i> PVLDB. 2012</li></ul>
Requirements	none
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 2
Turn	every 4th Semester but not regularly.
Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	English

## Module: Planning and Optimal Control

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After the completion of this module, the students should be able to map practical tasks to their respective theoretical problem. They should have developed a deeper understanding in the field of Planning and Optimal Control. They should be able to recognize the different types of planning and control problems as well as understand, implement and apply different techniques. The students should be capable of adapting those techniques to specific applications. In addition, they should be in a position to understand and elaborate further procedures based on the literature.
Content	The lecture will discuss main topics from Planning and optimal control theory. The topics discussed will be: <ol style="list-style-type: none"> <li>1. <i>Discrete and Heuristic Search</i></li> <li>2. <i>Motion Planning</i></li> <li>3. <i>Dealing with dynamics and Stochastic Optimal Control</i></li> <li>4. <i>Reinforcement Learning</i></li> </ol>
Submodules	<i>SM 1: Planning and Optimal Control, lecture</i> Type: 2 HPW lecture (3 ECTS) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme <i>SM 2: Planning and Optimal Control, tutorial</i> Type: 2 HPW tutorial (3 ECTS) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group
Literature	<ul style="list-style-type: none"> <li>• H. Geffner, B. Bonet: <i>A Concise Introduction to Models and Methods for Automated Planning</i>, Morgan and Claypool, 2013.</li> <li>• D. Nau, M. Ghallab, P. Traverso: <i>Automated Planning: Theory and Practice</i>, Morgan Kaufmann, 2004.</li> <li>• H. Choset, K. M. Lynch, S. Hutchinson, G. Kantor, W. Burgard, L. E. Kavraki and S. Thrun. <i>Principles of Robot Motion: Theory, Algorithms, and Implementations</i>; MIT Press, Boston, 2005.</li> <li>• Steve LaValle. <i>Planning Algorithms</i>; Cambridge University Press, 2006 (Available Online).</li> <li>• Dimitri P. Barto. <i>Reinforcement Learning: An Introduction</i>. MIT Press, Cambridge, MA, 1998.</li> </ul>
Requirements	none
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 3

## Compulsory Modules – Planning and Optimal Control

---

Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	English

**Module: Lab Course Programming Machine Learning**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	4 HPW lab course
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The praktikum allows students to gain practical knowledge and capabilities in the area of Machine Learning.
Content	<p>This implementation-oriented course offers hands-on experience with current algorithms and approaches in Machine Learning and Artificial Intelligence, and their application to real-world learning and decision-making tasks. Praktikum will also cover empirical methods for comparing learning algorithms, for understanding and explaining their differences, for analyzing the conditions in which a method is more suitable than others. List of Methods:</p> <ol style="list-style-type: none"><li>1. Linear models of prediction (Linear Regression, Logistic Regression)</li><li>2. Generative learning algorithms (Discriminant Analysis, Naïve Bayes)</li><li>3. Classification trees (Decision Trees)</li><li>4. k - Nearest Neighbor</li><li>5. Clustering (k-Means)</li><li>6. Dimensionality Reduction (Principal Component Analysis)</li><li>7. Support Vector Machines</li><li>8. Matrix Factorization for Recommender Systems</li></ol>
Submodules	none
Literature	<ul style="list-style-type: none"><li>• Brett Lantz: <i>Machine Learning with R</i>, Packt Publishing, 2013.</li><li>• Drew Conway, John Myles White: <i>Machine Learning for Hackers</i>, O'Reilly, 2012.</li></ul>
Requirements	none
Exam	colloquium and written summary
Recommended Term	MSc 1
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	English

**Module: Lab Course Distributed Data Analytics**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	4 HPW lab course
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The praktikum allows students to gain practical knowledge and capabilities in the area of Machine Learning. Praktikum will also cover empirical methods for comparing learning algorithms, for understanding and explaining their differences, for analyzing the conditions in which a method is more suitable than others.
Content	Practical knowledge of methods and technologies for distributed computing in data analysis: <ol style="list-style-type: none"><li>1. working with a scheduler in a Computer Cluster (e.g. Sun Grid Engine)</li><li>2. working with a distributed data system to manage big data</li><li>3. working with NoSQL-data-bases for loose structured data</li><li>4. Large Scale distributed file systems and data storage frameworks</li><li>5. Computational models for large scale data (e.g. MapReduce and GraphLab)</li><li>6. working with message passing frameworks</li><li>7. working with GPU/ coprocessor-machine</li></ol>
Submodules	none
Literature	<ul style="list-style-type: none"><li>• Anand Rajaraman, Jure Leskovec, and Jeffrey Ullman: <i>Mining of massive datasets</i></li><li>• Yucheng Low, Joseph Gonzalez, Aapo Kyrola, Danny Bickson, Carlos Guestrin and Joseph M. Hellerstein: <i>Distributed GraphLab: A Framework for Machine Learning and Data Mining in the Cloud</i> PVLDB. 2012</li></ul>
Requirements	none
Exam	colloquium and written summary
Recommended Term	MSc 2
Turn	every summer term
Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	English

**Module: Data and Privacy Protection**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture
Credit Points	3 CPs
Workload	presence: 21 hours; self-study: 54 hours
Learning goals/ Competencies	Students have an overview of specific requirements of data and privacy protection in different application areas such as e-commerce and medicine. Students know basic laws about data and privacy protection in Germany, the EU and the US and can apply them to specific situations. Students have a broad overview of technological tools to protect data and privacy.
Content	<p>The lecture provides an overview of methods for data and privacy protection, esp.</p> <ol style="list-style-type: none"> <li>1. Requirements of data and privacy protection <ol style="list-style-type: none"> <li>a) General requirements</li> <li>b) Requirements in e-commerce</li> <li>c) Requirements in medicine</li> </ol> </li> <li>2. Laws about data and privacy protection <ol style="list-style-type: none"> <li>a) German Laws</li> <li>b) EU Laws</li> <li>c) US Laws</li> </ol> </li> <li>3. Data and privacy protection policies &amp; technologies <ol style="list-style-type: none"> <li>a) IT security</li> <li>b) Data encryption</li> <li>c) Authorization and Rights Management</li> </ol> </li> </ol>
Submodules	none
Literature	<ul style="list-style-type: none"> <li>• David G. Hill: <i>Data Protection: Governance, Risk Management, and Compliance</i>, Crc Pr Inc, 2009.</li> <li>• Helen Nissenbaum: <i>Privacy in Context: Technology, Policy, and the Integrity of Social Life</i>, Stanford Univ Pr, 2009.</li> </ul>
Requirements	none
Exam	written exam (60 - 90 min) or oral exam (20 min)
Recommended Term	MSc 2
Turn	every summer term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li> </ul>
Language	English

**Module: Seminar Data Science II**

Responsible	Prof. Dr. Niels Landwehr, Prof. Dr. Dr. Lars Schmidt-Thieme
Responsible Instructors	Prof. Dr. Dr. Lars Schmidt-Thieme und Angestellte der Arbeitsgruppe
Type	2 HPW Seminar
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	Ziel des Seminars ist die selbständige Erschließung und Ausarbeitung eines vorgegebenen Inhaltsbereichs. Durch die Teilnahme an der Veranstaltung und die wissenschaftliche Diskussion über die Vorträge wird das Verständnis der bereits erworbenen Kenntnisse vertieft. Erwerb von Methodenkompetenzen, insb. besitzen Studierende eine Transferkompetenz, die es ihnen erlaubt, ihren Wissensstand selbständig technischen und gesellschaftlichen Entwicklungen anzupassen. Generell werden einfache bis fortgeschrittene Themen behandelt, welche gewisse Grundlagen in Data Science voraussetzen.
Content	Ausgewählte Themen aus den Bereichen der Data Science. Beispiele für Seminarthemen: <ol style="list-style-type: none"><li>1. Machine Learning</li><li>2. Data Mining</li><li>3. Data Visualization</li></ol>
Submodules	keine
Literature	je nach Thema
Requirements	Die Inhalte der Module „Maschinelles Lernen“ und „Seminar Data Science I“ werden vorausgesetzt.
Exam	Vortrag und Ausarbeitung. Die Sprache des Moduls und der Prüfung ist Deutsch oder Englisch.
Recommended Term	BSc 4-6
Turnus	jedes Semester
Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	Englisch

**Module: Seminar Data Analytics I**

Responsible	Prof. Dr. Niels Landwehr, Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW seminar
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	The students deepen their analytic and methodological skills for understanding current research areas. Writing a report and giving a presentation as well as discussing scientific issues with their peers help the students to put the knowledge acquired during their studies into context and gives them an opportunity to add new knowledge to their corpus. Furthermore, skills are developed which will allow the students to adapt their knowledge to changing technical and societal conditions in the future.
Content	Selected topics in the area of data analytics. Covers advanced topics that require an advanced background in data science.
Submodules	<i>SM 1: Seminar Data Analytics I</i> Type: Seminar (4 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group
Literature	depending on the topic
Requirements	none
Exam	Presentation and written summary
Recommended Term	MSc 1-3
Turn	every semester
Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	English

**Module: Seminar Data Analytics II**

Responsible	Prof. Dr. Niels Landwehr, Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW seminar
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	The students deepen their analytic and methodological skills for understanding current research areas. Writing a report and giving a presentation as well as discussing scientific issues with their peers help the students to put the knowledge acquired during their studies into context and gives them an opportunity to add new knowledge to their corpus. Furthermore, skills are developed which will allow the students to adapt their knowledge to changing technical and societal conditions in the future.
Content	Selected topics in the area of data analytics. Covers very advanced topics that require a very advanced background in data science.
Submodules	<i>SM 1: Seminar Data Analytics II</i> Type: Seminar (4 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group
Literature	depending on the topic
Requirements	Seminar Data Analytics I
Exam	Presentation and written summary
Recommended Term	MSc 1-3
Turn	every semester
Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li></ul>
Language	English

## Module: Student Research Project

Responsible	Prof. Dr. Niels Landwehr, Prof. Dr. Dr. Lars Schmidt-Thieme
Type	4 HPW project
Credit Points	15 CPs
Workload	presence: 42 hours; self-study: 333 hours
Learning goals/ Competencies	Students independently learn how to plan and manage their projects and thus develop methodological and social skills. Through teamwork they develop social skills such as conflict solving strategies, communicative skills and team management. In this project students improve their experience in research methodology, they independently formulate research topics, create the research design and reflect on them critically and organize the implementation of research processes. They should be in a position to independently work on a new topic and use known methods on new problems. They are able to document their project and present their solution.
Content	<p>In teams students work out a contribution for a extensive problem. The following contents are treated, independently from the specific task:</p> <ol style="list-style-type: none"> <li>1. Iterative formulation, verification and revision of research topics</li> <li>2. Iterative design and critical reflection of research design</li> <li>3. Basic and advanced research methods</li> <li>4. Project management methods</li> <li>5. Organization, management, leading group sessions</li> <li>6. Project documentation</li> </ol> <p>Other contents depends on the project task.</p>
Submodules	<p><i>SM 1: Student Research Project, Part I</i> Type: Project (6 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme</p> <p><i>SM 2: Student Research Project, Part II</i> Type: Project (9 Cps) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group</p>
Literature	depending on the topic
Requirements	none
Exam	Project
Recommended Term	MSc 2-3
Turn	every semester
Duration	2 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Compulsory Modules</li> </ul>
Language	English

# Elective Modules

## Methodological Specialization

### Module: Advanced Case-Based Reasoning

Responsible	Dr. Pascal Reuss
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students have an extended understanding of case-based reasoning. They master advanced and detailed procedures to develop, operate and maintain case-based reasoning and be able to use them for more complex scenarios. Students are able to assign complex scenarios and case studies to special task classes and to state-of-the-art and state-of-the-practice.
Content	Development, operation and maintainance of case-based reasoning and its application. Some characteristics of case-based reasoning like case-based classification, diagnosis and decision making, configuration and design and case-based planning are presented for special task categories. The application potential is shown in case studies and in state-of-the-art/practice-systems.
Submodules	<i>SM 1: Advanced Case-Based Reasoning, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Dr. Pascal Reuss <i>SM 2: Advanced Case-Based Reasoning, Tutorium</i> Type: 1 HPW Tutorium (2 CPs) Lecturer: Prof. Dr. Klaus-Dieter Althoff and members of the study group

**Module: Advanced Computer Vision**

Responsible	Prof. Dr. Niels Landwehr
Responsible Instructors	See submodules
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After completion of the module, students are familiar with different problem settings and tasks studied in modern computer vision. They understand how machine learning techniques and specifically deep neural networks can be used to solve these tasks. They are able to build upon established techniques and adapt them to novel problem settings, enabling them to solve practical computer vision problems.
Content	The lecture starts with an overview of deep neural networks. It then discusses design principles of deep neural network architectures for computer vision problems. Specific computer vision problems such as image classification, segmentation, object detection and localization, or metric learning are discussed. The lecture also presents examples for practical applications of computer vision techniques in different domains.
Submodules	<i>SM 1: Advanced Computer Vision, lecture</i> Type: 2 HPW lecture (3 CPs) Lecturer: Prof. Dr. Niels Landwehr <i>SM 2: Advanced Computer Vision, tutorial</i> Type: 2 HPW tutorial (3 CPs) Lecturer: Prof. Dr. Niels Landwehr and members of the study group

**Module: Bayesian Networks**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students have detailed knowledge about Bayesian Networks. They are able to model problems using Bayesian Networks. They understand exact and approximative inference methods and are able to choose suitable methods depending on the problem. Students know learning methods for parameter and structure and can estimate the results of learning processes. They get used to work with new books in Bayesian Networks.
Content	The lecture introduces bayesian networks. Based on modelling influences and conditional probabilities, algorithms for exact and approximative inference, analysis of bayesian networks, learning parameters and learning structure are treated. Algorithms for inference and learning bayesian networks go back to graph-algorithms as well as methods like topological sorting and connectivity-property and specific methods like counting cliques and so on. Every necessary algorithm will be introduced in the lecture.
Submodules	<i>SM 1: Bayesian Networks, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme <i>SM 2: Bayesian Networks, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group

**Module: Business Analytics**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Lecturer	none
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	<ul style="list-style-type: none"><li>• Understanding the classical forecasting methodologies and their application to business domains</li><li>• Exploring the state-of-the-art in terms of Recommender Systems and the Internet economy</li><li>• Empowering the analytical ability to abstract the necessary data-driven methodologies for complex business problems</li></ul>
Content	Business Analytics aims at introducing students to the fundamental data science know-how, which provides a start-level proficiency for tackling data-driven business problems. Initially the course explains prediction models for Regression and Classification tasks, as well as typical Clustering approaches. Frequent Pattern Mining that discovers association rules from transactional data will be covered as well. Dimensionality Reduction techniques are taught with regards to both visualisation and feature extraction aspects. In addition, personalized strategies in the realm of Recommender Systems will be exploited. On the other hand, the course covers Time-Series Forecasting methods, as well as Process Mining from industrial data logs. Last, but not least, the course aims at providing an introduction on current strategies needed to scale data analytics methods to handle big data.
Submodules	<i>SM 1: Business Analytics, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme <i>SM 2: Business Analytics, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group

**Module: Computer Vision**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After the completion of this module, the students should be able to solve relevant tasks and research questions from the Computer Vision. They should have developed a deeper understanding in the field of Computer Vision. They should be able to understand, implement and apply different Computer Vision techniques. The students should be capable of adapting those techniques to specific applications. In addition, they should be in a position to understand and elaborate further procedures based on the literature.
Content	The course will cover statistical data-driven approaches for automatic processing, analyzing and understanding of images. The lecture will cover topics from the pre-processing of images, like image filtering and feature detection to object recognition and object tracking as well as image classification.
Submodules	<i>SM 1: Computer Vision, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme <i>SM 2: Computer Vision, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group

**Module: Large Language Models**

Responsible	Dr. Maximilian Stubbemann
Responsible Instructors	Dr. Maximilian Stubbemann, Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Conversation bots based on Large Language Models (LLMs) have caused a massive public interest into the developments in the field of artificial intelligence. In this course, the students will learn how these models work and on which fundamental concepts they are based on. More specifically, the students will gain an understanding of the architectures and training procedures that are the building blocks of recent LLMs.
Content	The course will contain the major concepts behind LLMs, including: <ul style="list-style-type: none"><li>• The Attention Mechanism and Transformer Architecture</li><li>• Generative and Masked Pre-Training</li><li>• Reinforcement Learning from Human Feedback</li><li>• Scaling Laws for LLMs</li></ul>
Submodules	<i>SM 1: Large Language Models, lecture</i> Type: 2 HPW lecture (3 CPs) Lecturer: Dr. Maximilian Stubbemann, Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group <i>SM 2: Large Language Models, tutorial</i> Type: 2 HPW tutorial (3 CPs) Lecturer: Dr. Maximilian Stubbemann, Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group
Literature	will be announced in the lecture

**Module: Deep Learning**

Responsible	Prof. Dr. Niels Landwehr, Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Deep learning has recently been associated with revolutionary Artificial Intelligence achievements, ranging from “close-to-human” speech and image recognition performances, up to “super-human” game playing results. Throughout this course, students will have the opportunity to understand the building blocks of neural networks
Content	The curriculum starts by introducing supervised learning concepts and incrementally dives into the peculiarities of learning the parameters of neural networks through back-propagation. Specific architectures, such as the Convolutional Neural Networks will be covered, as well as different types of network regularization strategies. Furthermore implementation techniques involving GPU-based optimization will be explained. The students are expected to master the necessary knowledge that will empower them to apply Deep Learning in real-life problems.
Submodules	<i>SM 1: Deep Learning, lecture</i> Type: 2 HPW lecture (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme <i>SM 2: Deep Learning, tutorial</i> Type: 2 HPW tutorial (3 CPs) Lecturer: Prof. Dr. Dr. Lars Schmidt-Thieme and members of the study group

**Module: Deep Learning Masterclass**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Responsible Instructors	Prof. Dr. Artus Krohn-Grimberghe
Type	4 HPW lecture, 4 HPW tutorial
Credit Points	6 CPs
Workload	presence: 84 hours; self-study: 66 hours
Learning goals/ Competencies	The course allows students to gain practical knowledge and capabilities in the area of Deep Learning. Students will be able to reproduce probabilistic models from state-of-the-art techniques from recent papers.
Content	This 10-day full-time instructor-led deep-dive course for coders consists of three parts. The first part, an overview over deep learning and deep neural networks, which problems they are applicable to, how they work and how they are implemented on a very high level (using pytorch building blocks to be precise) on day 1. The second part teaches how to code deep learning using deep neural networks efficiently for various problem settings such as image classification, multi-class classification, tabular data, audio, image segmentation, superresolution, neural style transfer, GAN and NLP on days 2-6. The third part re-creates large parts of fast.ai and pytorch as an optional module for those who want to dive deep into the inner workings of deep learning during days 7-10. The days of this course are structured such that the mornings consist of recorded lectures presenting the jupyter notebooks with the course contents and the afternoons consist of paper reading and presentation groups (reading several of the original seminal and brand new publication that drive the field), code presentation groups and guided coding and q&a sessions. Participants are encouraged to apply the learned content on their own datasets or rehearse or prepare materials during the evenings.

**Module: Graph Analytics**

Responsible	Prof. Dr. Jürgen Sander
Responsible Instructors	Dr. Jan-Hendrik de Wiljes
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The students will be able to model and analyse (static) network structures with graphs and graph theoretic methods. Further, they get an understanding of network dynamics and corresponding models like random graphs and percolation models. Finally, the students use graphs to model (general) data and solve typical problems via the application of state-of-the-art methods.
Content	The following aspects will be presented and discussed: <ol style="list-style-type: none"> <li>1. Introduction, network classification and typical problems</li> <li>2. Graph partitioning and community detection</li> <li>3. Power and centrality analysis</li> <li>4. Link analysis (and link prediction)</li> <li>5. Network dynamics (and models)</li> <li>6. Modelling "non-graphic" data (similarity graphs,...)</li> </ol>

**Module: Lab Course Deep Learning**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	4 HPW lab course
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The lab allows students to gain practical knowledge and capabilities in the area of Deep Learning. Students will be able to reproduce probabilistic models from state-of-the-art techniques from recent papers.
Content	<p>The lab allows students to gain practical knowledge and capabilities in the area of Deep Learning. This implementation-oriented course offers hands-on experience with current algorithms and approaches in Deep Learning and their application to real-world learning and decision-making tasks. This course will provide capabilities for students to reproduce experiments seen in papers and also how to model their discoveries. This course also aims to guide students in how to use Deep Learning tools and also to adopt healthy implementations practices. The methods being taught will change according to recent publications allowing students to participate in research in current topics. Methods will include:</p> <ol style="list-style-type: none"> <li>1. Basic usage of Deep Learning Tools</li> <li>2. Implementation of basic types of networks: CNN, RNN, and FCN.</li> <li>3. Data Pre-Processing</li> <li>4. Image Classification</li> <li>5. Image Segmentation</li> <li>6. Time Series Analysis</li> <li>7. Reccomender Systems</li> </ol>

**Module: Machine Learning for IT Security**

Responsible	Prof. Dr. Niels Landwehr
Responsible Instructors	See submodules
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After completion of the module, students have a detailed understanding of how machine learning can be used in IT security to detect and counter threats and attacks. They are able to map IT security problems to appropriate problem settings in machine learning and choose effective data representations for a given problem. They also understand the limitations of using data-driven methods such as machine learning in a security context. They are finally able to read and follow the current literature on machine learning in IT security to further enhance their knowledge about the topic.
Content	The lecture studies different threats and tasks in IT security (such as filtering malicious email messages, detecting malicious executable files, discovering security vulnerabilities in source code, or detecting fraudulent activity). We discuss how such tasks can be cast as machine learning problems, the process of data collection and data representation, and appropriate machine learning techniques for solving these tasks.
Submodules	<i>SM 1: Machine Learning for IT Security, lecture</i> Type: 2 HPW lecture (3 CPs) Lecturer: Prof. Dr. Niels Landwehr <i>SM 2: Machine Learning for IT Security, tutorial</i> Type: 2 HPW tutorial (3 CPs) Lecturer: Prof. Dr. Niels Landwehr and members of the study group

**Module: Semi-supervised, Weakly Supervised, and Self-supervised Learning**

Responsible	Prof. Dr. Niels Landwehr
Responsible Instructors	See submodules
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After completion of the module, students are familiar with different problem settings in semi-supervised, weakly supervised and self-supervised learning. They understand how models can be learned even if little directly labeled data is available, by employing additional unlabeled data, data with proxy-labels or other information that can provide a training signal to a machine learning algorithm. Based on several application-specific examples discussed in the lecture, they are able to develop their own creative approaches of learning with limited data for novel application problems.
Content	The lecture will discuss several fields of machine learning that go beyond the traditional setting of supervised learning, by training predictive models with little or no labeled data. This includes semi-supervised learning approaches, which exploit unlabeled data; transfer learning approaches, which exploit labeled data from different but related domains; and self-supervised learning approaches that exploit other training signals than the output labels used in standard supervised learning. The lecture will often discuss such approaches based on concrete application problems.
Submodules	<i>SM 1: Semi-supervised, Weakly Supervised, and Self-supervised Learning, lecture</i> Type: 2 HPW lecture (3 CPs) Lecturer: Prof. Dr. Niels Landwehr <i>SM 2: Semi-supervised, Weakly Supervised, and Self-supervised Learning, tutorial</i> Type: 2 HPW tutorial (3 CPs) Lecturer: Prof. Dr. Niels Landwehr and members of the study group

**Module: Survey Sampling**

Responsible	PD Dr. Jürgen Groß
Responsible Instructors	PD Dr. Jürgen Groß
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students should be able to discern different elementary sampling designs, understand and handle the statistical implications of such designs, and be able to apply an appropriate sampling design to retrieve information about a target population. In addition, students should acquire knowledge of a statistical programming language to implement specific sampling designs tailored to accommodate given data.
Content	<p>The course gives an introduction to the statistical theory and methods for sample surveys based on probability sampling. Some elementary sampling designs are presented and their statistical and mathematical implications are discussed. The treated sampling designs include:</p> <ul style="list-style-type: none"><li>• Bernoulli Sampling, Simple Random Sampling, Systematic Sampling, Poisson Sampling, Probability Proportional-to-Size Sampling, Stratified Sampling, Cluster Sampling.</li></ul>

**Module: Time Series Analysis**

Responsible	Prof. Dr. Sebastian Mentemeier
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After completion of this module, students are able to describe and analyse time series data with methods from probability theory and statistics, to make predictions about future development of the observed time series and to make decisions based on observations of time series data. The students have a deeper understanding of mathematical models for time series and their fields of applications. They have good command of a statistical programming language, e.g. R.
Content	This lecture gives an overview of time series analysis from the viewpoint of mathematical statistics. It focusses on: <ul style="list-style-type: none"> <li>• Decomposition: Identification of trends and seasonal components</li> <li>• Models for discrete time series: Autoregressive Models, Moving Average Models and ARMA models, parameter estimation for these models</li> <li>• Models for heteroskedasticity: ARCH and GARCH models and parameter estimation</li> <li>• Aspects of extreme value theory for time series</li> <li>• Models for continuous time series: Brownian motion and related stochastic processes - if time permits.</li> </ul>
Submodules	<i>SM 1: Time Series Analysis, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Prof. Dr. Sebastian Mentemeier <i>SM 2: Time Series Analysis, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Sebastian Mentemeier and members of the study group

**Module: Social Network Analysis**

Modulverantwortlicher	Prof. Dr. Tom Hanika
Lehrform/SWS	2 SWS Vorlesung, 2 SWS Übung
Leistungspunkte	6 LP
Arbeitsaufwand	Präsenzzeit: 60 Stunden, Selbststudium: 90 Stunden presence: 60 hours, self-study: 90 hours
Lernziele/Kompetenzen	Durch diesen Kurs sollen die Studierenden ein breites Verständnis von Methoden und Techniken der Analyse sozialer Netzwerke (SN) erhalten. Sie sollen insbesondere verschiedene Modelle zur Analyse von SN mathematisch unterscheiden können und in der Lage sein, diese sowohl theoretisch als auch algorithmisch anzuwenden. Through this course, students should gain a broad understanding of social network analysis methods and techniques. In particular, they should be able to differentiate different models for analyzing SN and apply them theoretically as well as algorithmically.
Lehrinhalte	<p>1. Deutsch Dieser Kurs gibt eine breite Übersicht über das Themengebiet der sozialen Netzwerkanalyse mit besonderem Fokus auf die mathematischen und algorithmischen Grundlagen. Insbesondere werden die folgenden Themen besprochen:&lt;br /&gt;</p> <ul style="list-style-type: none"> <li>• Einfache Methoden und Graphstrukturen</li> <li>• Two-Mode Netzwerke und die Eigenschaften von Bipartiten Graphen</li> <li>• Gerichtete Netzwerke und Strukturelle Positionen</li> <li>• Small-World Netzwerke</li> <li>• Rollen und Zusammenhang in Netzwerken</li> <li>• Multi-relationale Netzwerke</li> <li>• Wissensgraphen interpretiert als Soziale Netzwerke</li> <li>• Temporale Netzwerke</li> </ul> <p>Dieser Kurs wird von einer Reihe von praktischen Lern-Übungen begleitet, welche in Python3 implementiert sind. 2. Englisch This course gives a broad overview over Social Network Analysis. Particular topics are:</p> <ul style="list-style-type: none"> <li>• Simple Networks and their Graph Structures</li> <li>• Two-Mode Networks and properties of Bipartite Graphs</li> <li>• Directed Networks and Structural Positions</li> <li>• Small-World Networks</li> <li>• Roles and Cohesion</li> <li>• Multi-relational Networks</li> <li>• Knowledge Graphs as Social Networks</li> <li>• Temporal Networks</li> </ul> <p>This course is accompanied by a number of Python exercises.</p>

**Module: Conceptual Data Analysis**

Modulverantwortlicher	Prof. Dr. Tom Hanika
Lehrform/SWS	2 SWS Vorlesung, 2 SWS Übung
Leistungspunkte	6 LP
Arbeitsaufwand	Präsenzzeit: 60 Stunden, Selbststudium: 90 Stunden presence: 60 hours, self-study: 90 hours
Lernziele/Kompetenzen	Dieser Kurs versetzt die Studierenden in die Lage ordinale und begriffliche Methoden für die Analyse von Daten anzuwenden. Insbesondere besitzen sie die Fähigkeit, Hierarchien und Ontologien aus realen Daten zu lernen und diese zu interpretieren. Darüber hinaus haben Sie nach erfolgreichem Abschluss des Kurses die Kompetenz aus expliziten und impliziten Datentabellen logische Theorien des Datenschemas (d.h. der Features) zu berechnen und daraus neues Wissen abzuleiten. Upon completion of the course, students will be able to apply ordinal and conceptual methods in the analysis of data. In particular, they will be able to derive hierarchies and ontologies from real-world data and interpret them. Moreover, they will be able to derive implicational theories from data tables (i.e. the feature schemes) and deduce new knowledge through them.
Lehrinhalte	<p>1. Deutsch Die Vorlesung gibt einen Überblick zu ordinalen und begrifflichen Datenanalysemethoden. Insbesondere werden die folgenden Themen diskutiert:&lt;br /&gt;</p> <ul style="list-style-type: none"> <li>• Relationale Daten und Ordnungsrelationen</li> <li>• Lernen von Ordnungen</li> <li>• Ordinale Datenanalyse</li> <li>• Formale Begriffsanalyse</li> <li>• Begriffliche Skalierung von Daten und stetige Abbildungen zur Skalierung</li> <li>• Lernen von Implikationstheorien in expliziten und impliziten Datenquellen</li> <li>• Boolesche Faktorenanalyse und Rekonstruktionsfehler</li> </ul> <p>&lt;br /&gt; 2. Englisch The lecture gives an overview on ordinal and conceptual data analysis. In particular, we will discuss: &lt;br /&gt;</p> <ul style="list-style-type: none"> <li>• Relational Data and Order Relations</li> <li>• Learning to Order</li> <li>• Ordinal Data Analysis</li> <li>• Formal Concept Analysis</li> <li>• Conceptual Scaling of Data and continuous scaling maps</li> <li>• Learning Implicational Theories from Explicit and Implicit Data</li> <li>• Boolean Factor Analysis and Reconstruction Errors</li> </ul> <p>&lt;br /&gt;</p>

**Module: Foundations and Applications of Knowledge Representation**

Modulverantwortlicher	Prof. Dr. Tom Hanika
Lehrende	Prof. Dr. Tom Hanika
Lehrform/SWS	2 SWS Vorlesung, 2 SWS Übung
Leistungspunkte	6 LP
Arbeitsaufwand	Präsenzzeit: 60 Stunden, Selbststudium: 90 Stunden presence: 60 hours, self-study: 90 hours
Lernziele/Kompetenzen	<p>Dieser Kurs versetzt die Studierenden in die Lage mit den gängigsten graphischen und logischen Formalismen für die Wissensrepräsentation umzugehen. Sie erhalten theoretische als auch praktische Fähigkeiten, insbesondere im Umgang mit Wissensgraphen (Knowledge Graphs) und Modellierungswerkzeugen für Ontologien (z.B. Protégé). Ebenso werden Kompetenzen zu entsprechenden Datenmodellen (z.B. Resource Description Framework — RDF) und Anfragesprachen (z.B., SPARQL Protocol And RDF Query Language) entwickelt. Ein wichtiges Ziel ist auch Kompetenzen im Umgang mit unsicherem Wissen zu erhalten.</p> <p>This course enables students to deal with the most common graphical and logical formalisms for knowledge representation. They gain theoretical as well as practical skills, especially in dealing with knowledge graphs and modeling tools for ontologies (e.g. Protégé). Likewise, competencies on corresponding data models (e.g., Resource Description Framework — RDF) and query languages (e.g., SPARQL Protocol And RDF Query Language) will be developed. An important goal is also to obtain competencies in dealing with uncertain knowledge.</p>
Lehrinhalte	<p>1. Deutsch Die Vorlesung gibt einen Überblick zu den theoretischen Grundlagen als auch der praktischen Anwendung von Wissensrepräsentationen. Insbesondere werden die folgenden Themen diskutiert: + Aussagenlogik und Prädikatenlogik 1. Stufe + Horn-Formeln, Logische Programmierung, und die Programmiersprache Prolog + Knowledge Graphs, Grundlagen und Implementationen + RDF und SPARQL + Beschreibungslogiken, Taxonomien und Wissensbasen + Nicht-Monotone Logik und Schließen + Inkonsistentes Wissen + Argumentation + Unsicheres Wissen &lt;br /&gt; 2. Englisch The lecture gives an overview of the theoretical foundations as well as the practical application of knowledge representations. In particular, the following topics are discussed: + Propositional logic and 1st level predicate logic. + Horn formulas, logical programming, and the Prolog programming language + Knowledge Graphs, fundamentals and implementations + RDF and SPARQL + Description Logics, Taxonomies, and Knowledge Bases. + Non-Monotonic Logic and Reasoning + Inconsistent knowledge + Reasoning + Uncertain knowledge &lt;br /&gt;</p>

## Application

### Computer Science/Software Engineering

#### Module: Software Engineering

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Prof. Dr. Klaus Schmid and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The aim of this module is to provide a basic understanding of the problems, challenges and solution approaches of software engineering. The focus is on teaching essential techniques, as well as the methodological approaches of systematic software development. Students will acquire competencies for problem analysis, as well as competencies in the area of design and implementation of IT systems. In particular, students understand the fundamentals of software engineering workflows and software engineering modelling techniques.
Content	<p>The fundamentals of software development are taught on a large scale. This includes in particular:</p> <ol style="list-style-type: none"><li>1. Process, product and quality reference models</li><li>2. Process models and life cycle models such as the waterfall model, spiral model</li><li>3. Requirements engineering (among other things, use cases, business process modeling)</li><li>4. Software architecture (among other things, architecture styles, design patterns)</li><li>5. Implementation techniques</li><li>6. Testing techniques (black-box, white-box)</li><li>7. Verification techniques (formal verification, inspection techniques)</li></ol> <p>In the tutorial, the contents taught in the lecture are deepened by means of exercises. In the course of the exercise, tasks are worked on together as well as homework is distributed and corrected. The focus is on teaching the students the competence of independently applying the discussed techniques.</p>
Literature	<ul style="list-style-type: none"><li>• Ian Sommerville, Software Engineering, 10th Edition. Pearson, 2015.</li><li>• Current scientific publications. Announced in class.</li><li>• Additional Material, made available in class.</li></ul>
Requirements	general knowledge of computer science
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	BSc 4 or MSc 1
Turn	every winter term

Elective Modules – Application – Computer Science/Software Engineering – Software Engineering

---

Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li></ul>
Language	English

**Module: Model-based Software Engineering**

Responsible	Dr. Holger Eichelberger
Responsible Instructors	Dr. Holger Eichelberger; Prof. Dr. Klaus Schmid and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students are able to name the essential differences between various types of models in software development, to describe transformations between models and to reflect on these in the context of given use cases. They know the current state of science in this area and are able to relate different approaches to each other, or to distinguish them from each other. They know the current state of science in this area and are able to classify current work. They are able to continuously develop their knowledge.
Content	<p>The creation, processing, and analysis of models will be presented. Current approaches in these areas will be discussed. Main topics of the lecture are:</p> <ol style="list-style-type: none"> <li>1. Formal basics of models</li> <li>2. Meta-modeling</li> <li>3. Model semantics</li> <li>4. Textual and graphical models</li> <li>5. Model-to-model transformations</li> <li>6. Model-to-text transformations</li> </ol> <p>In the exercise, the contents taught in the lecture Model-Based Development are deepened by means of exercises. Tasks will be worked on together in the exercise and questions concerning the analysis of the methods will be discussed. The focus is on teaching the competence for independent analysis and further development by the students.</p>
Literature	<ul style="list-style-type: none"> <li>• Current scientific publications. Announced in class.</li> <li>• Additional Material, made available in class.</li> </ul>
Requirements	Knowledge of Software Engineering as thought, for example, in the course Software Engineering.
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1-3
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: Advanced Web Development**

Responsible	Dr. Holger Eichelberger
Responsible Instructors	Dr. Holger Eichelberger and members of the study group
Type	2 HPW lecture, 2 HPW lab course
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students acquire analytical and methodological competencies in the area of modern web technologies and architectures. They recognize and understand the practical constraints relevant to the implementation of modern web applications. They are able to reflect on possibilities and application areas of web technologies as well as associated development environments and to assess them in context. They acquire the technical competences for the realisation of an exemplary web application, especially by working in a team. Through teamwork and exchange with the lecturers, they acquire social skills such as conflict resolution strategies, communication skills, technology and effectiveness assessment.
Content	In this course, students learn software development for current web technologies. For this purpose, the technical basics of website creation, current web technologies and frameworks, associated development environments and techniques are explained and practiced in the form of an accompanying development project. The development work is done in a team and includes realization and testing of an (in the final stage) platform-dependent web application. Students learn the necessary activities and practice the underlying techniques and tools. The tasks typically relate to practicing the techniques and technologies explained.
Literature	provided in class
Requirements	<ul style="list-style-type: none"> <li>• Proven programming skills in at least one programming language</li> <li>• Knowledge of Software Engineering as thought, for example, in the course Software Engineering.</li> </ul>
Exam	Final presentation, prototype and written elaboration/documentation.
Recommended Term	MSc 1-3
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: Processes and Management of Software Engineering**

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Prof. Dr. Michael Hißmann; Prof. Dr. Klaus Schmid and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	This module teaches methodological and analytical competencies that are necessary for a scientific study of processes and management activities in the field of software engineering. In particular, competencies for empirical research in the field of software engineering are taught. This provides students with the necessary expertise to analyze the suitability of software development processes and quality management methods and to develop improvements. The students understand current research questions and approaches.
Content	<p>In this module, the fundamentals of the process models and management activities of software engineering are taught. Special emphasis is placed on the empirical scientific methods of software engineering. In particular, the following topics are addressed:</p> <ol style="list-style-type: none"> <li>1. Process modeling and process description languages.</li> <li>2. Basics of project management (cost estimation, project control)</li> <li>3. Maturity models and assessments (CMMI, ISO 9000, ...)</li> <li>4. Measurement and evaluation (e.g., Goal-Question-Metric)</li> <li>5. Organizational improvement approaches (QIP, TQM)</li> <li>6. Configuration management</li> <li>7. Quality Management</li> </ol> <p>In the exercise, the contents taught in the lecture: Processes and Management of Software Engineering are deepened by means of exercises. Tasks are worked on together in the exercise and questions concerning the analysis of the methods are discussed. The focus is on imparting the competence for independent analysis and further development by the students.</p>
Literature	Announced in class
Requirements	Knowledge of Software Engineering as thought, for example, in the course Software Engineering.
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1-3
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: Software Product Line Engineering**

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Prof. Dr. Klaus Schmid and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students understand the essential differences between single system and product line development, to describe the necessary methodological differences of a product line development and to reflect these in the context of given use cases. They know the current state of science in this field and are able to relate different approaches to each other or to distinguish them from each other. They know the current state of science in this field and are able to classify recent work. They are able to continuously develop their level of knowledge.
Content	<p>The entire software life cycle from the perspective of product line engineering (PLE) is presented. Current approaches from these areas are discussed. Since all sub-activities of software development are affected by PLE, all activities are also examined with respect to changes in a product line approach. Major focal points of the lecture are:</p> <ol style="list-style-type: none"> <li>1. Product portfolio planning from a technical perspective and from a market perspective</li> <li>2. Modeling of variability (decision modeling, feature modeling)</li> <li>3. Architecture patterns for representing variability</li> <li>4. Implementation mechanisms for the realization of variability</li> <li>5. Test strategies</li> <li>6. Maturity and adaptation models for product line development</li> </ol> <p>Within the scope of the exercise, the contents taught in the lecture: Software Product Line Development are deepened on the basis of exercises. Tasks are worked on together in the exercise and questions concerning the analysis of the methods are discussed. The focus is on imparting the competence for independent analysis and further development by the students.</p>
Submodules	<p><i>SM 1: Software Product Line Engineering, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Prof. Dr. Klaus Schmid</p> <p><i>SM 2: Software Product Line Engineering, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Klaus Schmid and members of the study group</p>

Literature	<ul style="list-style-type: none"> <li>• Frank van der Linden, Klaus Schmid, Eelco Rommes. Product Lines in Action. Springer, 2007.</li> <li>• Linda Northrop, Paul Clements. Feature-Oriented Software Product Lines: Concepts and Implementation. Springer, 2013.</li> <li>• Current scientific publications. Announced in class.</li> <li>• Additional Material, made available in class.</li> </ul>
Requirements	Knowledge of Software Engineering as thought, for example, in the course Software Engineering.
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1-3
Turn	every summer term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: Software Testing**

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Dirk Herrmann
Type	2 HPW lecture (with integrated tutorial)
Credit Points	3 CPs
Workload	presence: 21 hours; self-study: 54 hours
Learning goals/ Competencies	In this module, students acquire detailed knowledge of the field of software testing. They learn the basic procedures of software testing and acquire the necessary practical knowledge to perform this manually and automatically. They will also learn advanced testing methodologies that lead to the optimization of the defect detection rate. They are able to apply these techniques systematically and in a goal-oriented manner.
Content	This course broadly covers the fundamentals of software testing. This includes in particular: <ul style="list-style-type: none"> <li>• Basics of testing (incl. test levels)</li> <li>• Black-box/white-box testing</li> <li>• Derivation procedures for test cases (boundary cases)</li> <li>• Standards</li> <li>• Test metrics</li> <li>• GUI testing</li> </ul>
Literature	Announced in class
Requirements	<ul style="list-style-type: none"> <li>• Knowledge of Software Engineering as thought, for example, in the course Software Engineering.</li> <li>• Good programming knowledge, ideally Java.</li> </ul>
Exam	written exam (60 - 90 min) or oral exam (20 min)
Recommended Term	MSc 1-3
Turn	every summer term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: Analysis of Software Systems**

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Prof. Dr. Klaus Schmid and members of the study group
Type	2 HPW Lecture with Tutorium
Credit Points	3 CPs
Workload	presence: 21 hours; self-study: 54 hours
Learning goals/ Competencies	The students understand the range of different software analysis techniques, their advantages and limitations. In particular, they know the relevant algorithms and their underlying principles. They are able to apply those in the context of specific problems and implement some major ones. They also understand the major difficulties that are relevant to these tasks.
Content	<ul style="list-style-type: none"> <li>• Data-flow analysis</li> <li>• Control-flow analysis</li> <li>• Type analysis</li> <li>• Interprocedural analysis</li> </ul>
Literature	Anders Moller and Michael I. Schwartzbach. Static Program Analysis. Lecture Notes Aarhus University.
Requirements	<ul style="list-style-type: none"> <li>• Knowledge of Software Engineering as thought, for example, in the course Software Engineering.</li> <li>• Good programming skills</li> </ul>
Exam	written exam (60 - 90 min) or oral exam (20 min)
Recommended Term	MSc 3
Turn	every summer term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: Software Verification**

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Prof. Dr. Klaus Schmid and members of the study group
Type	2 HPW lecture and tutorial
Credit Points	3 CPs
Workload	presence: 21 hours; self-study: 54 hours
Learning goals/ Competencies	The students understand the range of different software verification techniques, their advantages and limitations. In particular, they know the relevant verification technologies and their underlying principles. They are able to apply those in the context of specific verification problems and use them for specialised situations. They also understand the range of applicability that can be expected per technique.
Content	<p>Various verification techniques and the underlying solver technologies.</p> <ul style="list-style-type: none"> <li>• Hoare-Style verification</li> <li>• Symbolic Execution</li> <li>• SAT-based Analysis</li> <li>• Satisfiability Modulo Theories (SMT)</li> <li>• Model Checking</li> </ul>
Literature	<ul style="list-style-type: none"> <li>• Current scientific publications. Announced in class.</li> <li>• Additional Material, made available in class.</li> </ul>
Requirements	<ul style="list-style-type: none"> <li>• Knowledge of Software Engineering as thought, for example, in the course Software Engineering.</li> <li>• Good programming skills</li> </ul>
Exam	written exam (60 - 90 min) or oral exam (20 min)
Recommended Term	MSc 1-3
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: Software Architectures**

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Prof. Dr. Klaus Schmid and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students learn the foundations of creating, evaluating and realizing software architectures. They understand the foundations of good architectures and they acquire the competence to define software architectures for specific systems. They also achieve the capability to evaluate and criticize existing architectures. The students understand the importance of software architectures in the software development lifecycle and how software architectures relate to business models on the one hand and technical aspects on the other hand.
Content	The course will cover both in a theoretically advanced and a practically concrete way the following areas: <ul style="list-style-type: none"> <li>• Principles of good architectures</li> <li>• Modeling architectures</li> <li>• Architectural styles, patterns, tactics</li> <li>• Design approaches</li> <li>• Architecture evaluation</li> <li>• Modern architecture paradigms like service-orientation</li> <li>• Architectures for Big Data Systems</li> </ul>
Submodules	<i>SM 1: Software Architectures, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Prof. Dr. Klaus Schmid <i>SM 2: Software Architectures, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Klaus Schmid and members of the study group
Literature	<ul style="list-style-type: none"> <li>• K. Bass, P. Clements, R. Kazman: <i>Software architecture in practice</i>. Addison-Wesley, 2012.</li> <li>• R.Kazman, H. Cervantes: <i>Designing Software Architectures</i>. Addison-Wesley, 2016.</li> <li>• Current scientific publications. Announced in class.</li> <li>• Additional Material, made available in class.</li> </ul>
Requirements	<ul style="list-style-type: none"> <li>• Knowledge of Software Engineering as thought, for example, in the course Software Engineering.</li> <li>• Good Programming Skills, preferably in Java, but other languages are also possible</li> </ul>
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1-3

**Module: Requirements Engineering for Quality**

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Prof. Dr. Michael Hißmann; Prof. Dr. Klaus Schmid and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students acquire the essential methodological and theoretical basics in requirements engineering. They can use different methods within the context of specific development situations and they are able to reflect the limits and possibilities of different approaches. Students can independently adapt these approaches to specific contexts.
Content	<p>This lecture introduces methodological and theoretical basics of requirements engineering. The components of requirements engineering and state-of-the-art techniques and their application are discussed. In particular:</p> <ol style="list-style-type: none"> <li>1. elicitation techniques</li> <li>2. requirements analysis and modelling</li> <li>3. creating contracts and requirements specifications</li> <li>4. quality requirements (reliability, security, usability)</li> </ol> <p>During the tutorial students deepen their knowledge of the material taught in the lectures. They solve tasks together and do homeworks. The tutorial focuses on communication, problem-solving-competence and transfer-competence.</p>
Literature	<ul style="list-style-type: none"> <li>• C. Rupp: <i>Requirements Engineering und Management</i>. Hanser, 2020.</li> <li>• K. Pohl: <i>Requirements Engineering: Fundamentals, Principles, and Techniques</i>. Springer, 2016.</li> <li>• Current scientific publications. Announced in class.</li> <li>• Additional Material, made available in class.</li> </ul>
Requirements	Knowledge of Software Engineering as taught, for example, in the course Software Engineering.
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1-3
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: SE Tools Lab**

Responsible	Prof. Dr. Klaus Schmid
Responsible Instructors	Prof. Dr. Klaus Schmid and members of the study group
Type	4 HPW lab course
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Students learn about different classes of software development tools that cover the essential phases of software development. Subsequently, the students have the necessary competences for the independent selection and application of tools.
Content	In this lab course, students learn the use of various software development tools and techniques. This includes tools for requirements engineering, modeling of software systems, version management and continuous integration. The lab course complements the contents of the Software Engineering course.
Literature	material handed out in class.
Requirements	Knowledge of Software Engineering as thought, for example, in the course Software Engineering.
Exam	multiple tasks with oral examination
Recommended Term	MSc 1-3
Turn	every summer term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>
Language	English

**Module: Master-Seminar Software Engineering**

Type	2 HPW seminar
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	The objective of this seminar is the autonomous exploitation and elaboration of a predetermined subject. The participation in course and the scientific discussion of the lectures will deepen the understanding of the knowledge already acquired. Acquirement of methodological competence: students gain transfer competence allowing them to autonomously adjust their level of knowledge to technical and social development.
Content	Different advanced topics from the field of modern Software Engineering.
Submodules	none
Literature	Depending on the topic
Requirements	Basic knowledge of Software Engineering.
Exam	Seminar paper and oral presentation
Recommended Term	MSc 2-3
Turn	every semester
Duration	1 Semester
Responsible	Prof. Dr. Klaus Schmid
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Computer Science/Software Engineering</li> </ul>

## Business Administration and Information Systems

### Module: Advanced Marketing / Marketing 2

Responsible	Prof. Dr. Julia Rieck
Responsible Instructors	Prof. Dr. Julia Rieck and members of the study group
Type	4 HPW lecture
Credit Points	4 or 6 CPs
Workload	presence: 42 hours; self-study: 58 hours
Learning goals/ Competencies	The students know different analysis methods for marketing data and use them specifically. Furthermore they can analyse market research data with the use of appropriate evaluation programs. Students are able to distinguish between alternative methods and to recognize possible limits. Furthermore they are capable to analyse and evaluate data sets and interpret the results. They are able to understand and to implement current developments independently.
Content	Topics covered on the course include market research relevant methods of data collection and analysis (supervised and unsupervised methods) and application in marketing.
Submodules	none
Literature	<ul style="list-style-type: none"> <li>• Malhotra, N., Nunan, D., Birks, D.: <i>Marketing Research: An applied approach</i>, Pearson Education Limited, 5th Edition, 2017</li> <li>• Kotler, P., Armstrong, G., Harris, L., Piercy, N.: <i>Principles of Marketing (European Edition)</i>, Pearson, 7th Edition, 2016</li> <li>• Sorger, S.: <i>Marketing Analytics: Strategic Models and Metrics</i>, CreateSpace Independent Publishing Platform, 2013</li> </ul>
Requirements	Machine Learning
Exam	Written exam (60 min) and submission of implementation/homework task(s). For details see LSF.
Term	MSc 1-3
Turn	every summer term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Business Administration and Information Systems</li> </ul>
Language	English

**Module: Project Scheduling**

Responsible	Prof. Dr. Julia Rieck
Responsible Instructors	Prof. Dr. Julia Rieck
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	<p>Upon completion of this course, the students can:</p> <ul style="list-style-type: none"> <li>• fully understand fundamental scheduling and sequencing problems that arise in resource-constrained project scheduling environments within the manufacturing and service industry,</li> <li>• apply state-of-the-art methodologies for effectively and efficiently planning projects subject to both precedence and resource constraints,</li> <li>• manage and control a project.</li> </ul>
Content	Project representation using activity networks, time analysis (estimating the project duration in a deterministic setting), resource management, i.e. resource leveling (leveling the use of the resources over time subject to a project deadline) and resource-constrained-project scheduling (scheduling the activities subject to the various precedence and resource constraints in order to minimize the project duration and other objective functions).
Submodules	none
Literature	<ul style="list-style-type: none"> <li>• Neumann, K.; Schwindt, C.; Zimmermann, J. (2003): <i>Project Scheduling with Time Windows and Scarce Resources</i>, 2nd edition, Springer, Berlin</li> <li>• Schwindt, C.; Zimmermann, J. **Module: Seminar Business Studies**

Responsible	Prof. Dr. Julia Rieck, Dr. Felix Hahne
Responsible Instructors	Prof. Dr. Julia Rieck, Dr. Felix Hahne and members of the study group
Type	2 HPW seminar
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	The objective of this seminar is the autonomous exploitation and elaboration of a predetermined subject. The participation in course and the scholarly debate about the presentations are to lead to a deeper understanding of previously acquired knowledge. Acquisition of methodological competence: students gain transfer competence allowing them to autonomously adjust their level of knowledge to technical and social development. Depending on the area of specialization, students acquire different economical competences and become acquainted with different instruments. Possible areas of specialization include: marketing, logistics, production, business intelligence systems.
Content	Different advanced topics from the fields of marketing (e.g. marketing research, marketing policy), logistics (e.g. transportation planning, location planning, warehousing), production, and business intelligence systems (e.g. support of business functions, opening of new business areas).
Submodules	none
Literature	depending on the topic
Requirements	The contents of a correspondent master's course in the selected topic are implied (e.g. Advanced Marketing, Advanced Logistics, Advanced Production, Business Intelligence Systems)
Exam	Seminar paper and oral presentation
Recommended Term	MSc 2-3
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Business Administration and Information Systems</li> </ul>

**Module: Business Intelligence and Data Warehousing**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Responsible Instructors	Prof. Dr. Dr. Lars Schmidt-Thieme
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Business Intelligence seeks to extract and present insights from operational data that are relevant to future decisions. In larger companies, it is common practice to provide the operating data for this in one place data warehouse adjusted and systematized
Content	This lecture deals with the basics of the task, the construction and realization of data warehouses and the embedding of data warehousing in the overall context of Business Intelligence.
Literature	<ul style="list-style-type: none"> <li>• J. Celko: <i>Joe Celko's Data Warehouse and Analytic Queries in SQL</i>, (2006) ISBN-13: 978-0123695123</li> <li>• Graziano, Linstedt: <i>Super Charge Your Data Warehouse</i>, (2011) ISBN-13: 978-1463778682</li> <li>• W.H. Inmon: <i>Building the Data Warehouse</i>, (2005) ISBN-13: 978-0764599446</li> <li>• J.E.Olson: <i>Data Quality: The Accuracy Dimension</i>, (2002) ISBN-13: 978-1558608917</li> </ul>
Requirements	none
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1-3

Language	English

**Module: Data Warehousing in Practice**

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Responsible Instructors	Christoph Seck
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	Business Intelligence seeks to extract and present insights from operational data that are relevant to future decisions. In larger companies, it is common practice to have the operational data in one place "data warehouse" cleared up and systematized.
Content	The core of the lecture is the development of a data warehouse based on a concrete example. The starting point is a seemingly simple problem from a manufacturing company. Even more than in Business Intelligence and Data Warehousing 1 (eng.), exercises and practical work will be at the center. The focus will, therefore, be on the aspects of the DWH process that take up most of the space in such projects: analysis of source systems, handling of insufficient requirements, data quality problems, unusual reporting requirements, etc. In addition, the lecture will deal with a few topics that were not dealt with in the last semester, or only in passing. These include Master Data Management, Data Vault and the current hypertexts Self Service BI and Big Data
Submodules	<i>SM 1: Data Warehousing in Practice, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Christoph Seck <i>SM 2: Data Warehousing in Practice, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Christoph Seck
Literature	<ul style="list-style-type: none"> <li>• J. ## Information Retrieval and Information Sciences

### Module: Introduction Information Retrieval (IR)

Responsible	Prof. Dr. Thomas Mandl
Lecturer	Prof. Dr. Thomas Mandl and members of the study group
Type	2 HPW lecture
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	Students know the technologies for representing Information Retrieval Systems and are familiar with search models. They should be able to describe Information Retrieval Systems and their components as well as assign them to fundamental paradigms. The Students are able to differentiate Information Retrieval systems from the area of Databases. They know how to use user-oriented processes for evaluating Information Processes.
Content	Information Retrieval deals with uncertain representation of unstructured knowledge (especially text) and a vague search of information. The lecture gives an overview of Retrieval-Processes and introduces in detail manual and automatic indexing as well as weighting and treats important search models (partial and exact match, vector space, language model). One main focuss are evaluation approaches. Other contents are user behavior, user interface, web-retrieval and multimedia-retrieval.
Literature	<ul style="list-style-type: none"> <li>• R. Manning, H. Schütze: <i>Introduction to Information Retrieval</i> Cambridge University Press. 2008.</li> </ul>
Requirements	none
Exam	written exam (60 - 90 min) or oral exam (20 min)
Recommended Term	MSc 1-3
Turn	every year
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Information Retrieval and Information Sciences</li> </ul>
Language	English

**Module: Introduction Natural Language Processing**

Responsible	Prof. Dr. Ulrich Heid
Lecturer	Prof. Dr. Ulrich Heid and members of the study group
Type	3 HPW lecture
Credit Points	4 CPs
Workload	presence: 32 hours; self-study: 68 hours
Learning goals/ Competencies	The Students know the most important symbolic and statistical language process methods and are able to estimate their performance and limits as well as their application relevance. They are able to understand and give a professional opinion on model and implementation approaches. The students know evaluation approaches for language processing systems and are able to evaluate on their own. During the tutorial they gain knowledge how to install and use language processing tools and know their functionality, their Input and Output and their resource requirements. They are able to interpret the different outcomes and judge them related to the explicit task. Some example of those tools are Tokenizer, Wordclass-Tagging, morphological and syntactical analysis systems (Parser) and so on.
Content	Tasks, methods, processes and application of language processing. The main focus are the fundamental rule-based and statistical procedures for automatic processing of written language; especially the ones who are important for information science applications (e.g. Information retrieval, Information-Extraction, Multilingual Applications). Evaluation methods and principles. The tutorial starts in the third week of the semester. First an introduction in Linux is given. Since week 3: exercises depending on the topics of the lecture: procedures, methods and application of language processing. The focus lies on the practical use of language processing tools available from the institute or the internet.
Submodules	<i>SM 1: Introduction Natural Language Processing, Lecture Type: 3 HPW Lecture (4 CPs)</i>
Literature	will be announced in the lecture
Requirements	basic knowledge in Information Systems.
Exam	written exam (60 - 90 min) or oral exam (20 min)
Recommended Term	MSc 1-3
Turn	every year
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Information Retrieval and Information Sciences</li> </ul>
Language	English

**Module: Multilingual Information Systems**

Responsible	Prof. Dr. Thomas Mandl
Lecturer	Prof. Dr. Thomas Mandl and members of the study group
Type	2 HPW lecture
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	The students should have developed a deeper understanding in multilingual information systems. They are able to use such systems target-oriented and apply evaluation methods to multilingual information systems.
Content	The multilingual content in Information Systems increases and must be handled. For example Information Retrieval or Text Mining to multiple language, structure and management of multilingual knowledge bases, software-localization as well as databases with multilingual content. Content of this course are methods, systems, evaluation methods and problems with the usage of information systems in multilingual areas. The students deepen their knowledge in multilingual information systems. They are able to use such systems target-oriented and apply evaluation methods to multilingual information systems.
Submodules	<i>SM 1: Introduction Information Retrieval (IR)</i> , Lecture Type: 2 HPW Lecture (4 CPs)
Literature	will be announced in the lecture
Requirements	Contents of the lecture „Introduction Information Retrieval (IR)“.
Exam	written exam (60 - 90 min) or oral exam (20 min)
Recommended Term	MSc 1-3
Turn	every year
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Information Retrieval and Information Sciences</li> </ul>
Language	English

**Module: Seminar Multilingual Information Retrieval**

Responsible	Prof. Dr. Thomas Mandl
Responsible Instructors	Prof. Dr. Thomas Mandl and members of the study group
Type	2 HPW seminar
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	The students are familiar with Multilingual Information Retrieval Systems, know the problems, tools and user-oriented evaluation methods. They are able to exploit and elaborate a predetermined problem.
Content	This Seminar deepens the knowledge of Multilingual Information Retrieval, presents state-of-the-art language-dependent and language-independent methods and shows tools for Multilingual Retrieval.
Submodules	none
Literature	depending on the topic
Requirements	The contents of the lecture „Multilingual Information Systems“
Exam	Active participation and written seminar paper.
Recommended Term	MSc 2-3
Turn	every year
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Information Retrieval and Information Sciences</li> </ul>

## Natural Language Processing

### Module: Natural Language Processing

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Lecturer	Prof. Dr. Christian Wartena and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The students have an understanding of structures in natural languages and the traditional symbolic and statistical approaches to model structures in phonology, morphology, syntax and lexical semantics. They have an overview of state-of-the-art Natural Language Processing (NLP) methods. Students are able to build applications using or extending standard NLP methods. They are able to familiarize quickly with other topics in NLP and are able to read original research literature.
Content	Student will learn the most important phenomena in natural languages on different levels of granularity, starting with the combination of sounds to the meaning of words, sentences and texts. You will get an introduction to main symbolic and statistical approaches to model these phenomena. All theoretical topics will be accompanied by exercises dealing with these phenomena and demonstrating their use in practical applications, like spelling correction, auto completion, keyword extraction, topic detection, named entity recognition, relation extraction, synonym detection, etc. Students will apply the basic natural language processing methods in the implementation of a small application or in the analysis of a data set. For this part they will study one specific phenomenon into depth and will be free to explore various machine learning and natural language processing techniques to find their own solution.
Submodules	<i>SM 1: Natural Language Processing 2, Lecture</i> Type: 2 HPW Lecture (2 CPs) Lecturer: Prof. Dr. Christian Wartena <i>SM 2: Natural Language Processing 2, Tutorium</i> Type: 2 HPW Tutorium (2 CPs) Lecturer: Prof. Dr. Christian Wartena and members of the study group
Literature	<ul style="list-style-type: none"><li>• Bird, Steven, Ewan Klein, and Edward Loper. Natural language processing with Python: analyzing text with the natural language toolkit. <i>O'Reilly Media, Inc.</i> (2009)</li><li>• Daniel Jurafsky and James H. Martin: Speech and Language Processing. Prentice Hall; 2nd edition (2008)</li><li>• Christopher D. Manning and Hinrich Schütze: Foundations of Statistical Natural Language Processing. The MIT Press (1999)</li><li>• Additional literature will be announced in the lecture</li></ul>

Requirements	Basic knowledge of theoretical Computer Science (Automata theory, complexity, rewriting systems, Markov models).
Exam	Several tests during the semester and/or written exam (60 - 90 min) or oral exam (20 min) or seminar paper
Recommended Term	MSc 2-3
Turn	irregular
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application</li> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Natural Language Processing</li> </ul>

**Module: Language Modelling**

Responsible	Prof. Dr. Ulrich Heid
Lecturer	Prof. Dr. Ulrich Heid and members of the study group
Type	2 HPW lecture 2 HPW project
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The students should have developed an understanding of structures in natural languages and the traditional symbolic and statistical approaches to model structures in phonology, morphology, syntax and lexical semantics. The students should understand the relevance of language modelling for information retrieval, information extraction and natural language processing. The students should be able to implement a model for one isolated linguistic phenomenon and be able to identify potentials of machine learning for that phenomenon.
Content	In the lecture the most important symbolic and statistical models for phonology, morphology and syntax, like e.g. optimality theory, two level morphology, Hidden Markov Models, phrase structure grammars and dependency grammars as well as their application to part-of-speech tagging, lemmatization and parsing will be presented. In the project one topic will be studied into depth using original literature. Students will investigate the possibilities to apply machine learning to improve the model or to reduce the implementation costs. The students will make a prototypical implementation.
Submodules	<i>SM 1: Natural Language Processing 2, Lecture</i> Type: 2 HPW Lecture, 2 HPW Project (6 CPs)
Literature	<ol style="list-style-type: none"> <li>1. Daniel Jurafsky and James H. Martin: <i>Speech and Language Processing</i>. Prentice Hall; 2nd edition (2008)</li> <li>1. Christopher D. ----------	---------

**Module: Natural Language Processing 2**

Responsible	Prof. Dr. Ulrich Heid
Lecturer	Prof. Dr. Ulrich Heid and members of the study group
Type	2 HPW lecture
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	Students gain an overview of state-of-the-art Natural Language Processing methods. They are able to estimate advantages and limits of those methods; they understand and can relate aspects of Natural Language Processing to Information Research and Human-Machine-Interaction. The students can develop a professional opinion on inputs, resources and outputs, and on Natural Language Processing applications.
Content	<p>The lecture treats selected areas of Natural Language Processing and Language Technology in detail with respect to state-of-the-art research, international as well as research at the institute. It focusses on methods and tools based on these methods. Some topics are:</p> <ol style="list-style-type: none"> <li>1. Analysis and annotation of textual data (tagging, parsing, annotation methods and representations, standards for interoperable annotated corpora, etc.).</li> <li>2. Methods and paradigms of Language Processing Evaluation: Evaluation methods, degrees, gold standard, shared tasks, etc.</li> <li>3. Statistical methods for Language Processing: lexicostatistics, co-occurrences analysis, statistical parsing, statistical machine translation, etc.</li> <li>4. Language Technology as method and tool: digital humanities applications, Language Processing daily life tools (e.g. dialogue systems, correction of orthography, style-checking, etc.).</li> <li>5. Modern Neural Network Language Models and their applications.</li> </ol>
Submodules	<i>SM 1: Natural Language Processing 2, Lecture</i> Type: 2 HPW Lecture (4 CPs)
Literature	will be announced in the lecture
Requirements	basic knowledge of Natural Language Processing.
Exam	Several tests during the semester and/or written exam (60 - 90 min) or oral exam (20 min). Homework
Recommended Term	MSc 2-3
Turn	irregular
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Natural Language Processing</li> </ul>

Language	English
----------	---------

**Module: Seminar Computer Linguistic Resources**

Responsible	Prof. Dr. Ulrich Heid
Responsible Instructors	Prof. Dr. Ulrich Heid and members of the study group
Type	2 HPW seminar
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	The students have a detailed knowledge about one selected Computer Linguistic Resource as an application for Natural Language Technologies. They are able to adapt and evaluate appropriate processes and applications to the selected application.
Content	This seminar deepens the knowledge of specific topics in Computational Linguistics and Language Technology. Students are led to their own research topics, ideally corresponding to the institute's research. The main theme concerns Language resources, their establishment, management and usage: e.g. corpora and corpus linguistics, from compiling and annotations to repositories. Data extraction from corpora. Other themes may concern electronic dictionaries, terminology data bases, special lexicons for Language Technology (e.g. Sentiment-Lexicons); standards on Language resources, Language Resources applications, e.g. in the area of Digital Humanities or intelligent Computer Aided Language Learning (CALL).
Submodules	none
Literature	depending on the topic
Requirements	The contents of the lecture „Natural Language Processing 2“
Exam	Colloquium and a written summary.
Recommended Term	MSc 2-3
Turn	irregular
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Natural Language Processing</li> </ul>
Language	English

**Module: Seminar Computer Linguistic Processes**

Responsible	Prof. Dr. Ulrich Heid
Responsible Instructors	Prof. Dr. Ulrich Heid and members of the study group
Type	2 HPW seminar
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	The students have acquired a detailed knowledge about at least one applied Computational Linguistic process. They are able to adapt and evaluate appropriate processes and applications to the selected application.
Content	This seminar deepens the knowledge of specific topics in Computational Linguistics and Language Technology; Students are led to own research topics, ideally corresponding to the institute's research concerning Computational Linguistics Processes, methods and applications: e.g. syntactic-semantic analysis, generation, models of dialogues, machine translation.
Submodules	none
Literature	depending on the topic
Requirements	The contents of the lecture „Natural Language Processing 2“
Exam	Colloquium and written summary.
Recommended Term	MSc 3
Turn	irregular
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Natural Language Processing</li> </ul>
Language	English

**Module: Project Computer Linguistic Resources**

Responsible	Prof. Dr. Ulrich Heid
Responsible Instructors	Prof. Dr. Ulrich Heid and members of the study group
Type	4 HPW project
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The students are able to analyse and to evaluate Computational Linguistic Resources. The students are able to respectively adapt or optimize Computational Linguistic Resources thereby solving practical questions and challenges independently. They are able to relate their solution to state-of-the-art research. This seminar imparts the foundations for a master thesis.
Content	Specialization and integrated, theoretical, methodological and practical research-based treatment of topics in Computational Linguistic and Language Technology with a focus on NL-Resources. The students independently solve tasks concerning such resources (e.g. participating in shared tasks, resource creation, and resources evaluation, etc). Other themes concern the analysis and the adaptation of relevant research-literature with respect to the topic. Possibly, a tutorial is offered; in this case, the workload is calculated as a sum of project and tutorial. Such tutorials can be utilized to mediate, to train and to deepen programming techniques, annotation schemes and -methods, specific statistical procedures, evaluation methods and/or usage of complex systems.
Submodules	none
Literature	depending on the topic
Requirements	The contents of the Module „Seminar Computer Linguistic Resources“
Exam	written summary

**Module: Project Computer Linguistic Processes**

Responsible	Prof. Dr. Ulrich Heid
Responsible Instructors	Prof. Dr. Ulrich Heid and members of the study group
Type	4 HPW project
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	The students are able to analyse and evaluate Computational Linguistic Processes, in other words Language Technology tools and applications. The students should be able to independently analyse and implement or respectively adapt or optimize questions from the area of Computational Linguistic Processes or Language Technology respectively. They are able to relate their solution to state-of-the-art research. This seminar imparts the foundations for a master thesis.
Content	Specialized and integrated, theoretical, methodological and practical research-based treatment of topics in Computational Linguistics and Language Technology with a focus on processes. The students independently solve tasks concerning such processes (e.g. participating in shared tasks, process development and implementation and/or evaluation, etc). Other themes concern the analysis and the adaption of relevant research-literature with respect to the topic. Possibly, a tutorial is offered; in this case, the workload is calculated as a sum of project and tutorial. Such tutorials can be utilized to mediate, to train and to deepen programming techniques, annotation schemes and -methods, specific statistical procedures, evaluation methods and/or usage of complex systems.
Submodules	none
Literature	depending on the topic

Exam	written summary
Recommended Term	MSc 3
Turn	irregular
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Natural Language Processing</li> </ul>
Language	English

**Module: Lab Course Natural Language Processing**

Responsible	Prof. Dr. Ulrich Heid
Lecturer	Prof. Dr. Ulrich Heid and members of the study group
Type	2 HPW lab course
Credit Points	4 CPs
Workload	presence: 21 hours; self-study: 79 hours
Learning goals/ Competencies	Testing of and independently work with tools, methods and resources in Language Processing. Evaluation of existing implementation approaches; implementation- and test/evaluation-practice. Knowledge of relevant tools and programming languages; skills for their productive usage: ability to estimate the realization of practical tasks in Language Processing.

Content	<p>In the Praktikum students deal with concrete research- and development topics in the sense of case studies with a high percentage of practical content. Obtain knowledge and skills with tools, methods and Language Technology resources. For example:</p> <ul style="list-style-type: none"><li>• (a) corpus-linguistic tools: tools for the whole corpus-linguistic process, starting with data acquisition and conversion (crawler, scripts) over annotation (tokenizing, tagging, parsing) till data extraction (search tools and strategies). Implementation of simple questions of language and information research in corpus-linguistic analysis; interpretation of the results.</li><li>• (b) script languages for working with text data: Introduction to one script language (Perl, Python), concepts of programming with script languages, working with big data. Implementation concepts, test and evaluation of scripts.</li><li>• (c) data bases and Natural Language Processing software projects: principles and praxis of relational data bases; SQL, definition and creation of data bases, linguistic data retrieval; adapt data bases in bigger software projects of Language Processing;; architecture and implementation strategies for the work with big text data. Aspects of other data bases approaches (e.g. XML-data bases, object oriented data bases)</li><li>• (d) statistic methods for Language Technology: need and task formulation for descriptive statistic methods for working with language data (e.g. corpus-linguistic work); fundamental statistical methods for distribution calculation, associations, evaluation matching, etc. Implementation concepts of statistical programming languages like R or Python.</li></ul> <p>In this lab, students deal with concrete research- and development topics in the sense of case studies – with a high percentage of practical content. They obtain knowledge and skills concerning tools, methods and Language Technology resources. For example:</p> <ul style="list-style-type: none"><li>• (a) Corpus Linguistic tools: Tools for the whole corpus-linguistic process, starting with data acquisition and conversion (crawler, scripts) over annotation (tokenizing, tagging, parsing) to data extraction (search tools and strategies). ## Psychology

### Module: Cognitive Psychology

Responsible	Professor Dr. habil. Christina Bermeitinger
Responsible Instructors	Professor Dr. habil. Christina Bermeitinger and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After completion of this module, students will have developed a deep understanding of concepts and methods of cognitive psychology.
Content	Introduction to the concepts and methods of cognitive psychology.
Submodules	<i>SM 1: Cognitive Psychology, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Professor Dr. habil. Christina Bermeitinger <i>SM 2: Cognitive Psychology, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Professor Dr. habil. Christina Bermeitinger and members of the study group
Literature	<ul style="list-style-type: none"> <li>Eysenck, Michael W., Keane, Mark T. (2020): Cognitive Psychology: A Student's Handbook, Taylor and Francis Ltd.</li> </ul>
Requirements	None
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1-3
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>MSc Data Analytics (fundamental track) – Elective Modules – Application – Psychology</li> </ul>

**Module: Brain and Neural Science**

Responsible	Professor Dr. rer. nat. Kristian Folta-Schoofs
Responsible Instructors	Professor Dr. rer. nat. Kristian Folta-Schoofs and members of the study group
Type	2 HPW lecture, 2 HPW tutorial
Credit Points	6 CPs
Workload	presence: 42 hours; self-study: 108 hours
Learning goals/ Competencies	After completion of this module, students will have developed a deep understanding of the functional organization and major properties of neural circuits of the brain that give rise to perceptions, thoughts, and planned actions. They will be able to outline basic neural principles essential for understanding human cognition and behavior. Furthermore, they will be able to discuss, how sensations are assembled into inner representations and formulated into plans for immediate behavior or concepts for future actions.

Content	<p>The human brain is a complex network of nerve cells and glial cells interconnected in systems of the central nervous system which construct our perceptions of the external world, fix our attention, and control our actions. Advances in neural science have been matched by advances in our understanding of the biology of higher brain functions which allow humans to perceive, act, think, speak, learn, and remember. Neural science represents a merger of molecular biology, neurophysiology, anatomy, embryology, cell biology, immunology, and biological psychology. Powerful research tools permit to investigate and describe the functional organization and system properties of neural circuits of the brain (in controlled experiments), and to link the molecular dynamics of individual nerve cells to representations of perceptual and motor acts. This module focuses on major neural structures, principles and mechanisms, and their relation to particular modes of cognition and behavior. We attempt to address the following questions:</p> <ul style="list-style-type: none"> <li>• How does the central nervous system and its organization develop?</li> <li>• What are the molecular mechanisms underlying the developmental processes responsible for assembling functional neural circuits?</li> <li>• How do nerve cells and glial cells communicate and interact with one another?</li> <li>• How do properties of specific nerve cells and different patterns of interconnections give rise to higher brain functions and particular modes of thinking and behavior?</li> <li>• To what extent are mental processes hard-wired into the neural architecture of the brain?</li> <li>• How is communication between neurons influenced by the environment, including the actions of other people?</li> <li>• How does the brain and its functional organization produce the remarkable individuality of human cognition and action?</li> <li>• What contributes to the pathogenesis of diseases that affect the structures and functions of the nervous system?</li> </ul>
Submodules	<p><i>SM 1: Brain and Neural Science, Lecture</i> Type: 2 HPW Lecture (3 CPs) Lecturer: Professor Dr. rer. nat. Kristian Folta-Schoofs  <i>SM 2: Brain and Neural Science, Tutorium</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Professor Dr. rer. nat. Kristian Folta-Schoofs and members of the study group</p>
Literature	<ul style="list-style-type: none"> <li>• Eric R. Kandel, John D. Koester, Sarah H. Mack, Steven A Siegelbaum: Principles of Neural Science. Sixth Edition. McGraw Hill, 2021.</li> </ul>
Requirements	None
Exam	written exam (120 min) or an oral exam (30 min)
Recommended Term	MSc 1-3

Elective Modules – Application – Psychology – Brain and Neural Science

**Environmental Sciences****Module: Geographic Information Systems**

Responsible	Prof. Dr. Martin Sauerwein
Type	2 HPW lecture, 4 HPW tutorial
Credit Points	6 CPs
Workload	presence: 63 hours; self-study: 87 hours
Learning goals/ Competencies	The students should be able to visualize geographic data and creating professional maps using GIS (SM 1). The second aim is that students gain basic knowledge of geoprocessing tools for the analysis of spatial geographic data in GI-Systems (SM 2).
Content	<ol style="list-style-type: none"><li>1. SM 1: The course introduces the fundamental concepts of Geographic Systems (GIS) and includes computer exercises with the software ArcGIS. In the course students acquire practical skills of major work steps as creating and editing spatial data, integrating data from different data sources, georeferencing, spatial queries, and creating and exporting maps.</li><li>2. SM 2: The second course focuses on spatial analysis and geoprocessing tools. In different GIS-projects real data sets are used for a spatial analysis with the software ArcGIS. The integration of software knowledge and ecological knowledge will be practiced.</li></ol>
Submodules	<i>SM 1: Geographic Information Systems I</i> Type: 2 HPW Lecture (2 CPs) 1 HPW Tutorium (1 CP) Lecturer: Prof. Dr. Martin Sauerwein <i>SM 2: Geographic Information Systems II</i> Type: 2 HPW Tutorium (3 CPs) Lecturer: Prof. Dr. Martin Sauerwein
Literature	will be announced in the lecture
Requirements	none
Exam	module exam: submission of a GIS-project and oral presentation of the GIS-project (20 min)
Recommended Term	MSc 1-3
Turn	every year
Duration	2 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Environmental Sciences</li></ul>

## Soft Skills

### Module: English 1

Responsible	external lecturer
Type	2 HPW lecture
Credit Points	3 CPs
Workload	presence: 21 hours; self-study: 54 hours
Learning goals/ Competencies	Students should be able to communicate and negotiate in correct English especially in the area of Data Analytics. They should know the specialist vocabular for written and oral communication.
Content	Writing and speaking English. Learn English grammar.
Submodules	<i>SM 1: English 1 I</i> Type: 2 HPW Lecture (3 CPs) Lecturer: external lecturer <i>SM 2: English 1 II</i> Type: 2 HPW Lecture (3 CPs) Lecturer: external lecturer
Literature	Refer to instructor
Requirements	none
Exam	Refer to instructor
Recommended Term	MSc 1-3
Turn	every winter term
Duration	1 Semester
Use	<ul style="list-style-type: none"> <li>• MSc Data Analytics (fundamental track) – Elective Modules – Application – Soft Skills</li> </ul>
Language	English

**Module: English 2**

Responsible	external lecturer
Type	2 HPW lecture
Credit Points	3 CPs
Workload	presence: 21 hours; self-study: 54 hours
Learning goals/ Competencies	Students should be able to run specialist negotiations in correct English, to speak and discuss fluently. They earn a great vocabulary to negotiate in the area of Data Analytics. They know the formal business communication and what has to be respected. Students should be able to present their results in English.
Content	Writing and speaking English. Learn English grammar.
Submodules	<i>SM 1: English 2 I</i> Type: 2 HPW Lecture (3 CPs) Lecturer: external lecturer <i>SM 2: English 2 II</i> Type: 2 HPW Lecture (3 CPs)
Lecturer	external lecturer
Literature	Refer to instructor

**Module: German 1**

Responsible	external lecturer
Type	2 HPW lecture
Credit Points	3 CPs
Workload	presence: 21 hours; self-study: 54 hours
Learning goals/ Competencies	This course should encourage students to speak German.
Content	This course focuses on different chapters of the German grammar, vocabulary and conversation.
Submodules	<i>SM 1: German 1 I</i> Type: 2 HPW Lecture (3 CPs) Lecturer: external lecturer <i>SM 2: German 1 II</i> Type: 2 HPW Lecture (3 CPs) Lecturer: external lecturer
Literature	Given in Class
Requirements	none
Exam	Exam
Recommended Term	MSc 1-3
Turn	every winter term

**Module: International Start-up School**

Responsible	Diana Püplichhuysen, M.A., MBA
Responsible Instructors	Diana Püplichhuysen, M.A., MBA
Lecturer	Diana Püplichhuysen, M.A., MBA
Type	2 HPW lecture
Credit Points	3 CPs
Workload	presence: 21 hours; self-study: 54 hours
Learning goals/ Competencies	The seminar teaches international students the core competencies to set up a business in Germany. Students are enabled to put their business idea into practice by means of business modelling while considering the specifics of the technology sector as well as the legal and tax regulations for self employment in Germany. Furthermore students are made familiar with the different possibilities of start-up financing and the support structures offered by regional networks.
Content	<ol style="list-style-type: none"> <li>1. Introduction into Business Modelling</li> <li>2. Specifics of the Technology Sector and Digital Entrepreneurship</li> <li>3. Fundamentals of the Legal System and Corporate Tax Regulations for self-employed</li> <li>4. Start-up Financing</li> <li>5. Start-up-related networks in the region</li> </ol>
Submodules	<i>SM 1: International Start-up School I</i> Type: 2 HPW Lecture (3 CPs) Lecturer: external lecturer <i>SM 2: International Start-up School II</i> Type: 2 HPW Lecture (3 CPs) Lecturer: external lecturer

# Master Thesis

## Module: Master Thesis

Responsible	Prof. Dr. Dr. Lars Schmidt-Thieme
Lecturer	According to agreement
Type	Master Thesis
Credit Points	30 CPs
Workload	presence: 0 hours; self-study: 750 hours
Learning goals/ Competencies	Student will acquire in-depth knowledge of the area data analytics. Through their master thesis projects students will gain necessary research skills and expertise on a specific issue of their own choosing in the area of data analytics.
Content	Students demonstrate adequate knowledge and understanding that provides a basis for developing original ideas within an academic context. Integrate knowledge and processes complex information that link to the chosen research topic. They prove their ability in reporting, source-finding, critical thinking and analysis, problem formulation and solving, argumentation, and reasoning.
Submodules	<i>SM 1: Master Thesis, Lecture</i> Type: written thesis (27 CPs) Lecturer: Professors in the course of study <i>SM 2: Master Thesis, Tutorium</i> Type: colloquium (3 CPs) Lecturer: Professors in the course of study
Literature	depends on the topic
Requirements	passed all necessary modules
Exam	written thesis
Recommended Term	MSc 4
Turn	every semester
Duration	1 Semester
Use	<ul style="list-style-type: none"><li>• MSc Data Analytics (fundamental track) –</li><li>• MSc Data Analytics (fundamental track) – Master Thesis</li></ul>
Language	English
